

TAGWOOD BBQ

BUILT IN CHARCOAL GRILL

Please note, these measurements and diagrams are a recommendation only, and are estimated, for reference only.

Dimensions may vary slightly because these products are hand finished. Always have the grill present while building the base to corroborate dimensions.

Always consult with professional and qualified personnel for the assembly/construction of the base/built-out with adequate materials and installation.

TAGWOOD BBQ is not responsible for inappropriate/erroneous installation or build-out.

Center or support surfaces must be leveled.

Must include ventilation holes through out the base to ensure adequate air flow.

The base needs to be made of noncombustible materials, such as concrete or steel. Never use flammable materials on or around where the product will be placed/installed. Do not install grill on or near combustible materials.

Note that if you purchased or wish to purchase the Secondary Grate accessory that fits on top of the firebox, you need to leave space to the left, for the handle movement, and on the side of the firebox, for the installation bracket.

Also, always leave space to the right the grill, for proper movement of the wheel to adjust the main grates height.
